

HYDROMAT HYDROTUBE "COMBO" FEEDERS

With feed cost soaring, it only makes sense to invest in the best feeders available. Hydromat and Hydrotube "Combo" feeders from AP provide excellent feed conversion and the added benefit of dramatic water savings to help lower the cost of effluent disposal.

Hydromat and Hydrotube "Combo" feeders combine the superior corrosion resistance and cleaning characteristics of 304 stainless steel with the rugged durability of solid steel rod construction.

HYDROTUBE FEEDERS

Hydrotube Combo feeders are available in three models; all ideally suited for use in wean to finish facilities.

HYDROMAT FEEDERS

Hydromat Combo feeders are equipped with one or two durable plastic hoppers which each provide 90 lbs. of feed storage and easy access for hand feeding bagged starter feeds. Feeders are designed for wean to finish use.

Hydromat and Hydrotube feeders are also available with all stainless steel construction.

PROVEN PERFORMANCE

Hydrotube Combo feeder after *nine years* of continuous use. Troughs and feeder gate bottom rails are constructed of 304 SS for years of trouble free service.

HYDROTUBE ADJUSTER

Hydrotube feeders feature an easy to operate screw type adjuster which can be precisely adjusted in increments of 1/32”.

HYDROMAT ADJUSTER

Hydromat feeders are equipped with a convenient indexed adjustment system that provides exact control of feed flow.

FEED SAVER

Feeder troughs feature a feed saver lip to prevent feed from being raked out of the feeder.

304 stainless steel bottom rail

FEEDER GATES

Feeder gates are constructed of 1/2” solid steel rods inserted through and welded to a 3/16” thick 304 SS bottom rail to provide the heaviest feeder gate in the industry. After welding, feeder gates are protected with a durable baked on powder coat finish.

Y-DROPS

Y-drops are available for all models of Hydrotube and double hopper Hydromat feeders. These Y-drops prevent feed spills and provide a clean installation with a single feed line drop.

CUPS & VALVES

Hydromat and Hydrotube Combo feeders feature premium quality Aqua-Globe valves and smooth easy to clean water pans. Water pipes and valves can be easily removed for service.

SPINNER

Both Hydromat and Hydrotube feeders are equipped with a stainless steel agitator that is easily moved by even newly weaned pigs. The spinner limits the need for feeder adjustment and keeps even high fat feeds flowing through the feeder.

Feeding Length	Model #	Feeder Width	Gate Height	Feed Tubes	Water Cups	Number of Pigs	Pig Weight
----------------	---------	--------------	-------------	------------	------------	----------------	------------
