Versatile & Easy to Install

PVC plank can be easily adapted to replace conventional building materials in a variety of livestock confinement applications including wall panels, confinement fencing, actuated ventilation applications and inner dividers.

**PVC WALL PANELS**

AP’s 1-3/4” x 32” PVC wall panel is typically used in the construction of walls or ceilings in farrowing and nursery buildings. Since there are fewer seams than conventional PVC walls, clean up is quicker. Tongue and groove construction provides added strength and speeds construction. For additional strength, or an attach point for gate brackets, 2 x 4 lumber can be installed anywhere in the panel.

**CONFINEMENT FENCING**

AP manufactures several easy to install confinement fencing options. Divider panels are available for farrowing crates for animals up to 30 lbs. Nursery pen dividers are easy to clean and available for animals between 30 and 120 lbs. Finishing plank is made for animals over 120 pounds and ideal for rugged duty applications such as boar studs and breeding areas.
**ACTUATED VENTILATION APPLICATIONS**

PVC is lightweight and weather resistant making it an excellent material for actuated ventilation applications. The inherent physical properties and core design of AP’s PVC panels provide better insulation and weather protection compared to other conventional curtain options.

**INNER DIVIDERS**

PVC inner divider panels can be used in drop feed, floor feed and trickle feed systems providing a corrosion resistant, durable and long lasting divider between feeding stations. PVC panels require little maintenance and are power wash friendly for easy cleaning.

---

PVC panels provide excellent energy savings in actuated ventilation applications.

AP offers screw driven controllers to easily and reliably power actuated ventilation systems.

AP offers a full line of drop feeders and feed delivery systems to meet your feeding requirements.

Ask about AP’s stanchion feeding options with long lasting stainless steel and pvc construction.
PROVEN & DEPENDABLE™

In today’s competitive market place, it is essential to maximize the efficiency and performance of your swine production facilities. AP is the industry leader in the manufacture of proven and dependable swine production equipment designed to help you meet these goals.

PVC PLANKING DIMENSIONS

Each plank profile has a full line of stainless steel and PVC accessories to install and support every application, including: stainless steel posts, PVC U-channel, H-channel, drop rods, drop rod ends, and corners.
