FEEDING SYSTEM

UNLOCK BETTER PERFORMANCE

# FLEXIBLE **MODULAR DESIGN**

The modular nature of the GSF system makes it the ideal system for retrofitting partially slatted barns. Feeders can be left where the conventional stalls are installed and the remaining stalls removed to make pen space for loafing sows.

## **SIMPLE AND ACCURATE**

AP's Gestation Sow Feeder combines the functionality of a free access stall with the accuracy of RFID sow feeding to provide a simple yet accurate system to feed sows in pen gestation individually.

### **RFID TAG (RADIO FREQUENCY ID)**

The GSF station recognizes sows through an RFID tag which adjust the feed schedule and ration to that animals individual needs.

### **RFID HAND WAND**

Make changes to the sow's feeding plan directly on the wand display and enter new sow arrivals into the system by scanning their ear tag.

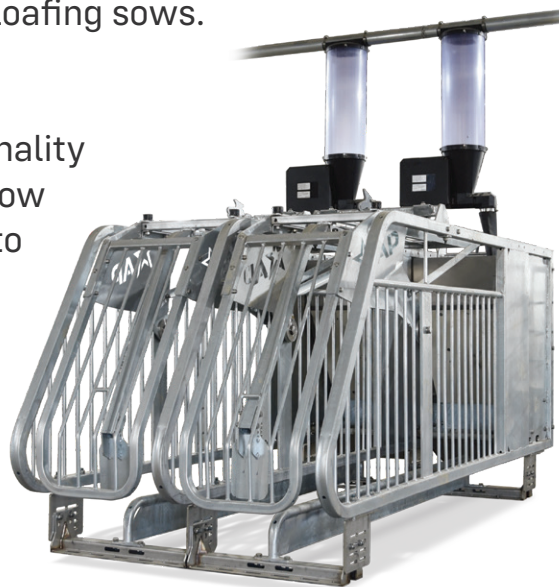

### **EASY FEED VERIFICATION**

A clear feed housing provides quick verification that feed is present in the feeder.

### **OPTIONAL COLOR MARKING**

Stations can be programmed for color marking based on particular sorting or nutritional requirements.

*AP's GSF features a modular feed system design targeting individual animal nutrition and welfare.*

*GSF is EDGE® Connect capable providing the herdsman extensive feed management control with the ability to customize the feeding requirements of each individual sow.*
